- No unattached parts.
- Large chambers with rounded corners.

- Contrast-coloured base

The Schine Pill Box S offers a new way of storing/dispensing pills. The roller shutter system makes the box easy to open and close, with no irritating protruding parts.

The Small model contains eight chambers which can be used as required. For example, you can load the box with one week's dosage, use an extra chamber, or load the box ahead of a weekend away. It provides substantial storage in a handy size and is easy to transport.

Thanks to the transparent shutters and coloured base, you can easily tell if the chamber is full. The Schine Box S comes in two colours, red and blue.

We own the Swedish patent.
